DREAM CITY

**OUR AIM IS  
TO REDUCE  
YOUR ENERGY  
CONSUMPTION AND  
MAKE YOUR FACILITY  
A GREEN FACILITY**

## Why Choose "JUVAS" LED Light?

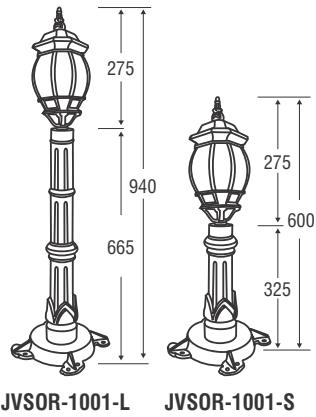

"JUVAS" LED lighting technology has progressed rapidly in recent years becoming an essential part of our advanced world. This is newest technology that is available to us at the moment. A Light Emitting Diode (LED) is a type of semiconductor device that emits light rays when electric current is passed through it. This technology has been around for years, but only recently has it been harnessed to provide lighting solutions for the world. LED lights have been widely used for some time now as streetlights, spotlights, floor lights, Panel Light and Bulbs.

## Advantages of using "JUVAS" LED Lights

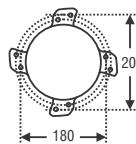

- 1. Make in INDIA :** Using JUVAS Led Bulbs & Fittings is like serving to the nation, as 80% of the Raw Material has been developed purely in INDIA using best quality raw materials. So we can proudly say "MAKE IN INDIA".
- 2. High efficiency :** In incandescent light bulbs only around 20% of the electric is used for production of light. The other 80% of the energy is wasted as heat. On the other hand JUVAS LED lights are able to utilize 80 to 90% of the energy provided in the generation of light. It is known as cold lighting because there is no production of heat.
- 3. Reduced electricity bills :** Since JUVAS LED light bulbs are super-efficient, their use will significantly reduce energy consumption and thus your electricity bills. You may be surprised to know that this lighting will use only 10% of the electricity that other devices were using before to provide the same amount of light.
- 4. Reduced maintenance cost :** JUVAS LED lights have a lifespan of about 25,000 hours which is remarkable when you consider that incandescent bulbs have a lifespan of only 1000 hours, while even fluorescent light bulbs can only last for 15,000 hours. In other words, JUVAS LED lights can last for a period of about 10 years. So, once install them you won't have to worry about replacing the bulbs for a long, long time. Moreover, JUVAS LED Lights are sturdily built and not prone to breakage.
- 5. Complete safety :** JUVAS LED lights don't contain any toxic chemicals or heavy metals like metals like mercury which is present in CFL. Hence, they pose no hazards in a home environment. Incandescent lights and CFLs also produce a small measure of UV radiation, but none is produced by JUVAS LED lights.
- 6. Environmental benefits :** Savings on electric bills is not the only benefit of the high efficiency LED lights. By reducing your energy usage you can reduce your carbon footprint. Most of the electricity is produced by burning fossil which release greenhouse gases into the atmosphere. This of course leads to global warming and climate change. If you use less electricity then less fossil fuel will be burnt and hence you will be playing your part in saving the environment.
- 7. Customer satisfaction :** is the prime objective of JUVAS, we follow strict quality control and focus on solutions that reduce operating costs and improve productivity. JUVAS is leading the way into a new era of environment and human friendly lighting thereby helping to shape the future of lighting technology.  
IN SUMMARY JUVAS provide the most versatile and cost effective lighting solutions available in the market today.  
Lighting the Way to a more sustainable and greener future.
